

A Clinical independence summary

Risk score remained part of clinical Model 2 with age, sex, and WBC log10. Supportive displays were presentation outputs, not deployment evidence.

Clinical covariates retained

Age, sex, WBC log10, and risk score were evaluated in the adjusted clinical model.

Interpretation boundary

Adjusted prognostic support is summarized without treatment recommendation or ELN replacement claims.

Presentation outputs

Nomogram, calibration, and DCA results remain supportive displays only.

B Candidate Cox ranking summary

Univariate Cox screening and downstream ranking identified a candidate pool for model locking, without displaying alternative six-gene coefficients.

Candidate pool context

715 candidates entered filtering; 33 GPL570-detectable candidates entered survival-model screening.

Top-ranked overlap

The top-ranked Elastic Net-Cox strategy and the fixed model converged on overlapping six-gene features.

Coefficient display removed

Cross-platform re-estimated six-gene coefficients are not displayed in this repaired figure.

C Locked Formula A display policy

Formula A is the only coefficient set allowed in the final manuscript package. Coefficient display remains restricted to Figure 2A.

Locked six-gene members

CLCN5, ARHGEF5, TRIM32, ITGB2, SAT1, ACOX2

Allowed coefficient display

Coefficient values are shown in Figure 2A only; this panel does not restate or replace them.

Explicit exclusions

No alternative coefficient set, cross-platform re-estimated formula, or old Figure 2 values appear here.

D Machine-learning stability summary

Survival machine-learning comparisons were retained as robustness evidence for the locked model, not as grounds for replacing it.

Planned comparison framework

The manuscript retains the planned 150-combination survival ML screening and ranking summary.

Retention decision

Clinical Model 2 support and external reproducibility favored retaining fixed Formula A.

Sensitivity feature sets

PPI-derived sensitivity feature strategies were evaluated but did not replace the fixed model.
