

A

B

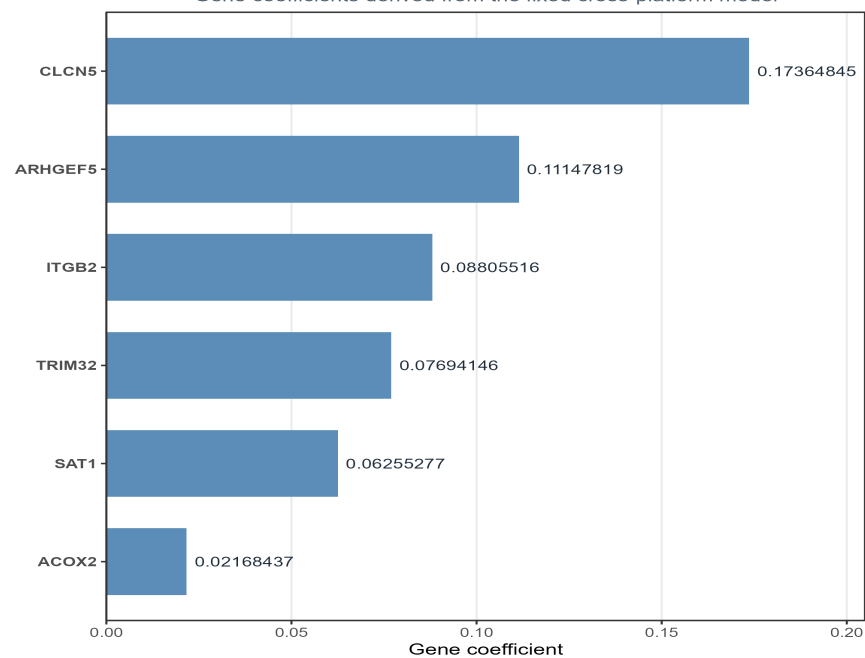

Top 20 univariate Cox candidate genes

C

Cross-platform six-gene PRFT-related signature

Gene coefficients derived from the fixed cross-platform model

Fixed risk score formula

Formula applied unchanged across validation cohorts

risk score =

$$\begin{aligned}
 &0.17364845 \times z(\text{CLCN5}) + \\
 &0.11147819 \times z(\text{ARHGEF5}) + \\
 &0.08805516 \times z(\text{ITGB2}) + \\
 &0.07694146 \times z(\text{TRIM32}) + \\
 &0.06255277 \times z(\text{SAT1}) + \\
 &0.02168437 \times z(\text{ACOX2})
 \end{aligned}$$

Gene-wise z-score was applied within each cohort before using the fixed coefficients.

This panel summarizes the fixed PRFT-related signature and does not re-estimate the model.
